**One of the only all aluminium boxes on the market – many boxes have an aluminium fascia and a steel body.**

**Outward opening flap – other post boxes can have an inward opening spring loaded flap which can seize up after a few years**

## Description

The Varbox Torino mixes modern style and engineering to create a post box that is ideal for use both inside and out. Built entirely from aluminium, the Torino is lightweight but durable. The modular design makes it easy to replace a unit should it be damaged.

Designed to last, the Torino features an outward opening letter flap, which is far less prone to jamming and breakage than traditional “push-in” style flaps. Several standard configurations are available, ranging from a single box unit to a 4 column/32 box model. Multi box units are available with a special rounded frame which provides security and increased weather resistance.

The Torino is also available as a build-to-order mailbox solution. A wide range of configurations are possible and a huge variety of colour options are available. The Torino can be wall-mounted, built into a wall, affixed to a fence or installed on a stand.
